

Yulia Yakovleva

Software engineer

Amsterdam
Netherlands
✉ redslowj@gmail.com
🔗 robolamp
in Yulia Yakovleva

Main skills

C++ (Eigen), Python (PyTorch, Jupyter, NumPy, Keras, TensorFlow, Sklearn), Git, ROS, Linux, Machine Learning, Deep Learning, HPC, Computer Vision, NLP, LLMs

Experience

November 2022 – **Machine learning engineer**, *Stability.ai*, Amsterdam

Now I worked on the following projects:

- Stable-Finetuning (Python, PyTorch, CUDA, diffusion models, HPC): I was mostly focused on whole preprocessing and training algorithm optimization. With my effort, the fine-tuning process became multiple times faster while the size of model increased. I managed to "accelerate" SAM to process big batches of images in less than 1 second. To comply with regulation, I managed to build a facial fine-tuning without facial keypoints detection. During the developed process, I was migrating the service between multiple generations of fine-tuned models and backends.
- Stability models API (Python, PyTorch, CUDA, diffusion models, AWS, HPC): Similar effort but without direct involvement into algorithms development.
- LLM-related project (Python, PyTorch, CUDA, LLMs, axolotl, HPC).

March 2022 – **Machine learning engineer**, *Rainbow.ai*, Warsaw

September 2022 ○ I worked on applying deep learning models for weather forecasting (Python, PyTorch, Weather RADAR data).

November 2021 – **Machine learning engineer**, *Descriptor.ai*, Remote/Moscow

February 2022 ○ I created a few good-performing voice sentiment analysis models (Python, NumPy, TensorFlow, Keras, Audio data).

July 2021 – **Machine learning engineer**, *MediaZona*, Remote/Moscow

October 2021 ○ AI Text Generation (NLP, Python, NumPy, TensorFlow, Keras, Transformers, GPT): I worked on conditional text generation with neural networks. My responsibilities included both engineering/coding and interaction with non-tech employees of MediaZona on translating their non-tech requirements into "tech language", finding the data and getting a feedback on text generators' work.

March 2018 – **Software engineer**, *Yandex Self-Driving Cars*, Moscow

- May 2021 ○ Sensor diagnostics software (ROS, C++, Python, NumPy): I created data quality checking software modules for cameras and LiDARs.
- Traffic lights recognition software (ROS, C++, Python, NumPy, TensorFlow, Keras).
- I worked on improvement of traffic lights recognition and tracking pipeline,
 - learning data mining, pre-processing and datasets preparation,
 - created, learned and deployed multiple iterations of deep neural networks, which are working now on hundreds of self-driving cars made by Yandex.

October 2015 – **Robotics researcher/developer**, *Institute for Information Transmission Problems RAS (Kharkevich Institute)*, Moscow

August 2017 (C++, Python, ROS, Eigen, Computer Vision, Kalman filters)

June 2015 – **Junior web-developer**, *WETA Group*, Remote
October 2015 Full-stack web-development
July 2013 – **Junior control systems developer**, *Modern Signal Processing and Control Technologies R&D Laboratory*, Chelyabinsk
June 2015

Patents

- 2020 **Method of and system for determining traffic signal state**
Artamonov, Kalyuzhny, Yakovleva
○ US Patent US20210201058A1, application at 2020.09.28, granted.
○ European Patent EP3842996A1, application at 2020.10.14, pending.

Talks

- 2019 **Myths about Self-Driving Cars**, *Presented at WTM Moscow*
2019 **Traffic Lights in Yandex Self-Driving Cars**, *Presented at Yandex Self-Driving Meetup 2019, PyLadies Moscow and PyLadies Kazan*
2020 **Data mining in Yandex Self-Driving Cars**, *Presented at Pytup Moscow*
2023 **What's going on in AI world**, *Presented in Warsaw*

Education

- 2010–2015 **National Research South Ural State University**;
Computer Technologies, Control and Radio Electronics Faculty;
Automation and Control Department;
MEng with honours.
2015–2017 **Moscow Institute of Physics and Technology (State University)**;
Department of Innovation and High Technologies;
Cognitive technologies sub-faculty;
MSc in Computer Science.

Volunteering

- May 2020 – now **Web developer/data analyst**, *OVD-Info*, Remote
OVD-Info is an independent human rights media project. I'm participating in development and support of information collection and analysis systems for OVD-Info using SQL, Python and Django.
Jan 2021 – now **Technical volunteer**, *Memorial*, Remote

Pet projects

rTerm, github.com/roboLamp/rTerm
Fake JS-based UNIX term for my personal page.

Random three body problem bot, github.com/roboLamp/3_body_problem_bot
A program which is simulating the behavior of random three body system multiple times and publishing animation of the most interesting one every 12 hours at Telegram channel.
